

Ajax-Chubb Fire Protection presents a new industrial hose reel and hi-ex inside air foam system at the StocExpo in Antwerp

- Especially for the oil and petrochemical industry Ajax-Chubb Fire Protection provides innovative fire safety solutions. From portable extinguishing equipment, fire and gas detection, fire fighting systems and service and maintenance, training your staff and the provision of firemen. We appreciate to show this to you at our stand (stand number 98) at the StocExpo 2010.

Hi-ex inside air foam system

Ajax-Chubb Fire Protection is specialized in **protecting tank storage and handling of chemicals**. One of our specialties is the Hi-Ex inside air foam fire extinguishing system for chemical storage. In the early nineties Ajax-Chubb Fire Protection developed and tested stainless steel aspirator-type foam generators. This foam generator has an expansion rate of 1:650 using HTF1000 foam, which has been developed especially for the protection of chemicals in warehouses. Since the introduction of **the Hi-Ex inside air foam system** in the Netherlands, Ajax-Chubb Fire Protection has protected various chemical stores in the Benelux, Israel and China, amongst others.

New industrial hose reel

Also, we like to bring our **new industrial hose reel** to your attention. Ajax-Chubb Fire Protection developed this hose reel for the Navy and chemical industries. This stainless steel (sea water resistant!) hose reel is fitted with an 1 ½ inch (38mm) hose with a length of 20 meter and a foam tank with a small mixer. Initially the hose reel provides a water jet with a choice between a bound jet or a spray. By further turning the ring on the nozzle foam is added to the jet by only one action. In this way the operator of the nozzle can easily choose between fighting with water or fighting with foam to extinguish the fire. Moreover, this system can be operated by only two persons, while normally four are needed to extinguish using hoses.

Visit us at stand 98

We would like to welcome you at our stand and inform you about the extensive possibilities we can offer in terms of fire protection. Also you will find Dr. Sthamer at the stand, who is presenting **their entire program of foam concentrates**.
