

For over two decades [TEC artec valves](#) has been developing and manufacturing industrial valves equipment in the range of power plants, gas and oil as well as in the petrochemical area.

The company sells to the German and international markets. Existing product lines are optimised and adjusted to the new challenges of the future.

The company also overhauls its valves up to the complete retrofitting of current systems. It has converted several valves for tank storage concerning the gasket system from soft to metallic sealed during the last few years. Existing gasket systems have also been improved.

TEC offers slide valves, shut off and control ball valves with an innovative engineering and material for the gas industry makes a safe shut-off possible as well as the exact control and automation of streaming mediums.

The gasket system can be executed soft or metallic sealed according to the operating requirement. Metallic gasket systems will allow a long lifetime of the valve. A shut-off and control slide valve with metallic sealing without oil can be tested by double-block-and bleed and can be fitted out with autarchic drive systems and measuring systems.
